English

Tagalog

Projects

○ 2023-2024

Lost and Found Monitoring Solution Utilizing a Web-Based System at Rizal Technological University

Developed a Lost and Found monitoring system exclusively for members of Rizal Technological University, particularly its students and employees. This system operates on two levels: user and administrator. Users can search for their lost items using any device, such as mobile phones or desktops, via a link on the website, and through the system they can request for an appointment to retrieve their item.

Abstract

Lost and Found monitoring solution, a system for handling lost and retrieval of items. Lost and Found Monitoring solution is done through MERN (MongoDb, Expressjs, React, Nodejs) stack and tailwind CSS.

○ 2022

Yokkyuu Ordering system

A Takoyaki ordering system, just by downloading the application, users or customers can be ready to go to order their food without the hassle of standing or waiting for the waiter to get their order.

Abstract

An application for takoyaki ordering system
Yakkyuu ordering system is done through android studio and Java.

Training

• Feb 2023- May 2023

Microphase Corporation I Legazpi village, Makati City On-the-job training program

Learning the fundamental knowledge about computer hardware such as assembling computer parts and the proper procedure of maintenance and troubleshooting. This knowledge not only enhances my technical proficiency but also enables me to contribute effectively to projects requiring hardware expertise.

Certifications

Fundamentals of Python with A.I | September 18, 2021

Hazard Awareness, Exposure, and Vulnerability | November 28, 2021

System development cycle | April 23, 2023

Cybersecurity essentials: What everyone needs to know | April 23, 2023

GXPC Youth talk "Reshaping and Innovation in an AI driven era" | May 15, 2023

Wadhani Foundation "Core Employability skills" | November 12, 2023
